

Signaling Systems Laboratory – PI Alexander Hoffmann

Our lab is dedicated to fostering a welcoming environment for all trainees, regardless of background. What unites us is a passion for research and for taking advantage of research training opportunities provided to us, and indeed for providing research opportunities to others. We strongly believe that different backgrounds and ways of thinking, often informed by those different backgrounds, strengthens the quality and innovation of research, as each individual can provide a unique perspective. This therefore increases our creative capacity and ability to ask and investigate important questions that make our work more impactful. We are committed to fostering a work climate in which all participants excited about the science can thrive and attain their education or career goals. Our commitment extends beyond the lab, but extends to outreach activities aimed towards making science more equitably accessible.
